

Uranus FAQ

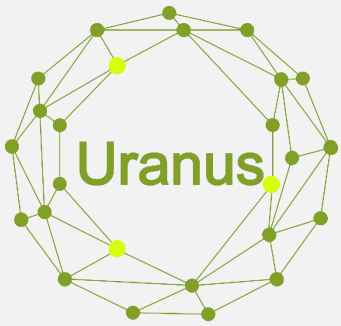

Question:

The developer is developing, all features are not open yet?

Answer:

Developer mode will be online in the official version

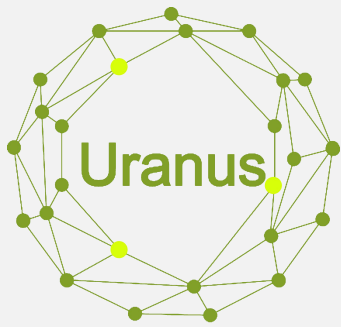

Question:

How to contribute UraPower

Answer:

After logging in to the system as a seller, the user enters the host interface. If there is no host and you are prompted to click the upper right corner to download the corresponding installation package, you can see the host after refreshing the interface after Install the installation package. When there are hosts, click Join Cluster on the right side of the host, select New Cluster, or join an existing cluster. After the cluster is successfully established, enter the cluster interface. At this time, the cluster is not for sale status. Click the gear in the upper right corner to enter the setting interface. Set the cluster name, rent and rental days. Click OK to change the status from not for sale to on sale in the upper right corner. At this point, the cluster can be leased by others, and when a transaction occurs, the seller can get the proceeds.

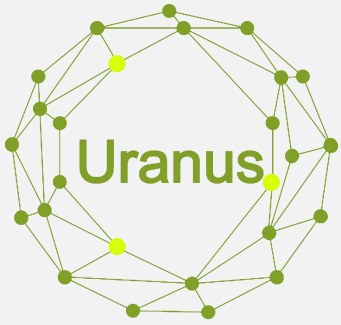

Question:

Seller sets the cluster price

Answer:

When the seller sets the cluster rent, Remember that the rent filled in is 1 KU per day, and the rent is the theoretical income formula: $\text{total} = \text{rent} * 1 \text{ kU} * n \text{ day}$ (n is the rental time you set)

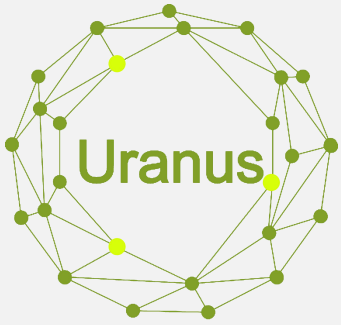

Question:

Algorithm of UraPower

Answer:

A: After the user logs in as the seller, download the installation package. After the installation is completed, the system automatically obtains CPU, memory, disk, network and other resources, Calculate according to the obtained parameters.

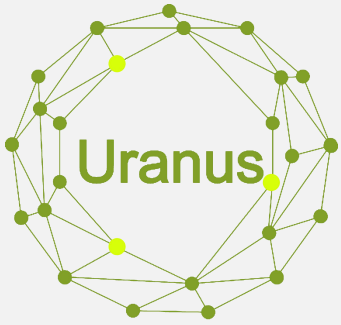

Question:

Seller cluster resources cannot be counted

Answer:

A: Due to the unstable disk and network resources provided by the seller, need further processing, We will completely improve in the official version.

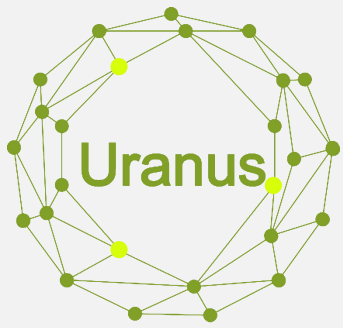

Question:

Buyer cluster resources cannot be counted

Answer:

The buyer did not download the installation package and could not feed back the corresponding resources, so it could not be counted.

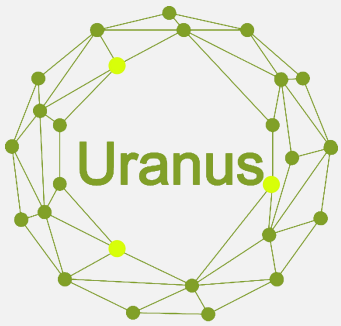

Question:

About block chain

Answer:

Any transaction regarding the transfer of the URAC needs to be confirmed on the blockchain network, and the transaction record can be queried in the blockchain browser.

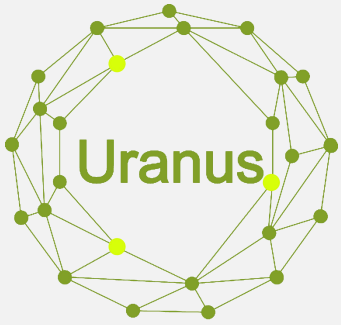

Question:

How to buy an app

Answer:

A: After the user enters the system as a buyer, Click the APP Store, select the application you want to deploy in the list. Click Deploy or View to enter the application details page, choose the UraPower pool to deploy or not to deploy, After the payment is completed and the blockchain confirms the order, the app can be used or viewed in my app. (My app is all apps that have been deployed or have already been purchased)

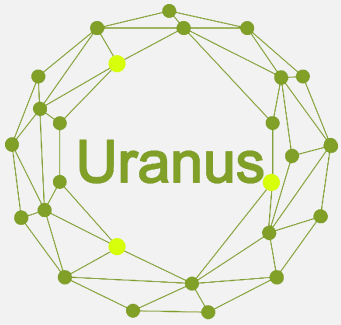

Question:

Purchase power

Answer:

A: After the user enters the system as a buyer, click on the purchase resource interface, select the appropriate resource configuration, name this UraPower pool, The purchase of the resource pool must be a process that requires blockchain confirmation, so wait for the payment to be completed, and after the network is confirmed, it can be used in the list of my resource pool.

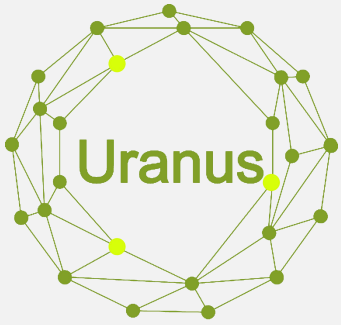

Question:

Why can't I use it directly after the purchase?

Answer:

A: When the selected application is a free application, use the existing resource pool, there is no need to wait; When the purchased application or resource pool needs to be paid, it needs to wait for the transaction order to be successfully recorded on the blockchain network before it can be used.
